01 / PROJECT BRIEF

A small project, clearly planned.

FICTIONAL SAMPLE. This is not a real assignment or commitment.

Project: Build a simple class showcase.

Goal: Show three useful tools with real outputs.

Audience: A teacher and classmates.

Format: A short browser demo and a source archive.

Three demo moments

1. Write a note and review a task draft.

2. Convert a sample image and open the downloaded file.

3. Start a game, pause it and explain its controls.

Success means the output works.

A polished button is not proof that a feature is complete.

02 / SAMPLE TASKS

A checklist you can inspect.

All names, quantities and statuses below are fictional sample data.

Task	Status	Priority
Prepare sample notes	To do	Normal
Check image conversion	In progress	High
Practice manual game controls	To do	Normal
Review privacy notes	Done	High

Sample totals: 4 tasks, 1 complete, 3 not complete.

These counts describe this sample PDF, not your APEX workspace.

Local workflow reminder

Browser workspace data is local unless an explicit service is used.

AI demos may depend on internet, provider availability and quota.

Always keep a manual input fallback for a camera demonstration.

03 / PRESENTATION NOTES

Explain what is real.

Use these notes as a reading / extraction / PDF conversion sample.

One-sentence introduction

APEX is a browser workspace with AI chat and local productivity tools.

What to demonstrate

A real note, a real downloaded file, and a game with real state.

What not to claim

Not 1,000 completed features. Not unlimited AI.

Not a finished autonomous operating system.

Not guaranteed camera accuracy or private public-AI demos.

Closing line

This MVP combines useful tools and makes its current limits visible.

Original APEX demo content. Contains no personal or account data.
